

PLANT MAINTENANCE POLICY 2026

It is the aim of Central Industrial Services Limited to provide a **continually improved** Plant Maintenance programme that will deliver fully maintained, serviced and reliable equipment to undertake safe operations for operators, staff, clients and the general public – conforming to our Quality System and Workshop Procedures ensuring conformance with all applicable legislation.

Throughout the years we have developed a supply chain of approved suppliers who deliver service, equipment and components that complement the stock held within our general store and workshop store ensuring key components required to maintain our plant and equipment are readily available to facilitate prompt repairs. This mechanism helps to control all maintenance aspects within the Company and will be assessed through our Purchasing and Supplier Policy.

In the event of major equipment or items of plant requiring repair, replacement or refurbishment out-with standard specifications and in need of additional capital and or funding, this will be escalated by the Workshop Foreman to the Directors who will make the decision whether it is cost effective to either repair or replace the plant and or equipment thus allowing the continuation of service delivery to our staff and customer base.

Where repair and replace requirements need specialised outsourcing, the facilitators will be vetted through our Purchasing and Supply Policy and we will ensure that all accreditations, requirements, assessments and specifications are adequate and fit for purpose prior to supplying any goods or carrying out repairs.

Our key values will never change, the priority will be to provide excellence in safety, health and environmental performance and that all our activities are carried out with paramount regard to current and future legislation, to the highest possible standard, and in a responsible manner, such that pollution of the environment is prevented and people are kept safe and healthy at all times. The Workshop Procedures within our Quality System which will be adhered to by our fully trained Engineering staff are designed to help deliver these values.

Signed

DH Cartwright - Chairman
